# HTML Tables

Course Code:CIS121

Module Leader: Md. Minhaj Hosen

Lecturer (CIS),

Daffodil International University (DIU)

Title	Title	Title	Title	Title	Title
Data	Data	Data	Data	Data	Data
Data	Data	Data	Data	Data	Data
Data	Data	Data	Data	Data	Data
Data	Data	Data	Data	Data	Data
Data	Data	Data	Data	Data	Data

# HTML Tables

- ◆ Tables represent tabular data
  - ◆ A table consists of one or several rows
  - ◆ Each row has one or more columns
- ◆ Tables comprised of several core tags:
  - <table></table>: begin / end the table
  - <tr></tr>: create a table row
  - <td></td>: create tabular data (cell)
- ◆ Tables should not be used for layout. Use CSS floats and positioning styles instead

# HTML Tables (2)

- ◆ Start and end of a table

```
<table> ... </table>
```

- ◆ Start and end of a row

```
<tr> ... </tr>
```

- ◆ Start and end of a cell in a row

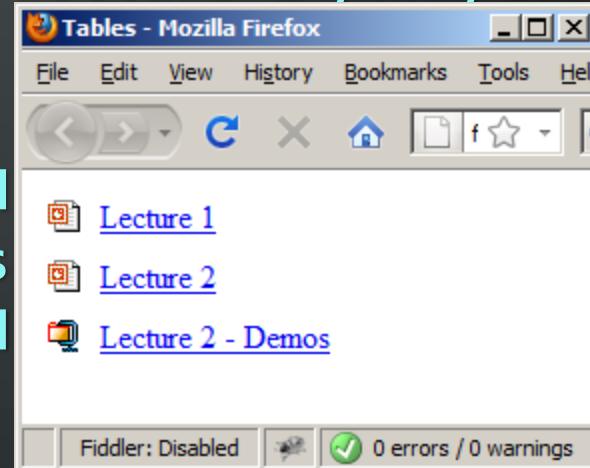

```
<td> ... </td>
```

# Simple HTML Tables – Example

```
<table cellspacing="0" cellpadding="5">
<tr>
  <td></td>
  <td><a href="lecture1.ppt">Lecture 1</a></td>
</tr>
<tr>
  <td></td>
  <td><a href="lecture2.ppt">Lecture 2</a></td>
</tr>
<tr>
  <td></td>
  <td><a href="lecture2-demos.zip">
    Lecture 2 - Demos</a></td>
</tr>
</table>
```

# Simple HTML Tables – Example (2)

```
<table cellspacing="0" cellpadding="5">
<tr>
  <td></td>
  <td><a href="lecture1.ppt">Lecture 1</a></td>
</tr>
<tr>
  <td></td>
  <td><a href="lecture2.ppt">Lecture 2</a></td>
</tr>
<tr>
  <td></td>
  <td><a href="lecture2-demos">
    Lecture 2 - Demos</a></td>
</tr>
</table>
```

# Complete HTML Tables

- ◆ Table rows split into three semantic sections: header, body and footer
  - <thead> denotes table header and contains <th> elements, instead of <td> elements
  - <tbody> denotes collection of table rows that contain the very data
  - <tfoot> denotes table footer but comes BEFORE the <tbody> tag
  - <colgroup> and <col> define columns (most often used to set column widths)

# Complete HTML Table: Example

```
<table>
<colgroup>                                columns
    <col style="width:100px" /><col />
</colgroup>
<thead>                                    header
    <tr><th>Column 1</th><th>Column 2</th></tr>
</thead>
<tfoot>                                    footer
    <tr><td>Footer 1</td><td>Footer 2</td></tr>
</tfoot>
<tbody>                                    Last comes the body (data)
    <tr><td>Cell 1.1</td><td>Cell 1.2</td></tr>
    <tr><td>Cell 2.1</td><td>Cell 2.2</td></tr>
</tbody>
</table>
```

# Complete HTML Table: Example (2)

By default, header text  
is bold and centered.

table-full.html

```
<table>
  <colgroup>
    <col style="width:
  </colgroup>
  <thead>
    <tr><th>Column 1</th>
  </thead>
  <tfoot>
    <tr><td>Footer 1</td><td>Footer 2</td></tr>
  </tfoot>
  <tbody>
    <tr><td>Cell 1.1</td>
    <tr><td>Cell 2.1</td>
    <tr><td>Footer 1</td>
  </tbody>
</table>
```

Column 1	Column 2
Cell 1.1	Cell 1.2
Cell 2.1	Cell 2.2
Footer 1	Footer 2

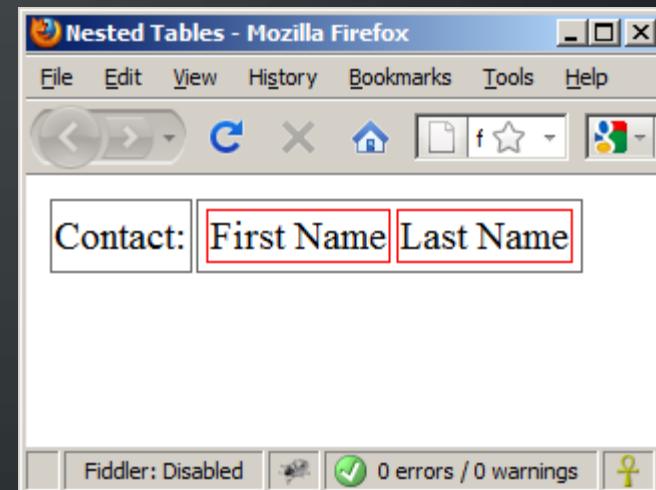

Although the footer is  
before the data in the  
code, it is displayed last

# Nested Tables

- ◆ Table data “cells” (`<td>`) can contain nested tables (tables within tables):

```
<table>
  <tr>
    <td>Contact:</td>
    <td>
      <table>
        <tr>
          <td>First Name</td>
          <td>Last Name</td>
        </tr>
      </table>
    </td>
  </tr>
</table>
```

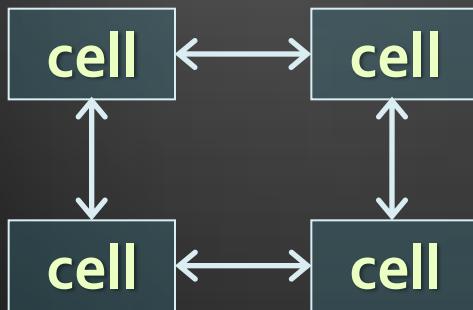

nested-tables.html

# Cell Spacing and Padding

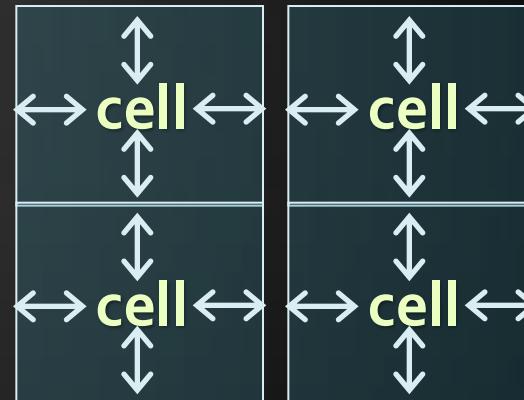

- ◆ Tables have two important attributes:

- ◆ cellspacing

- ◆ Defines the empty space between cells

- ◆ cellpadding

- ◆ Defines the empty space around the cell content

# Cell Spacing and Padding – Example

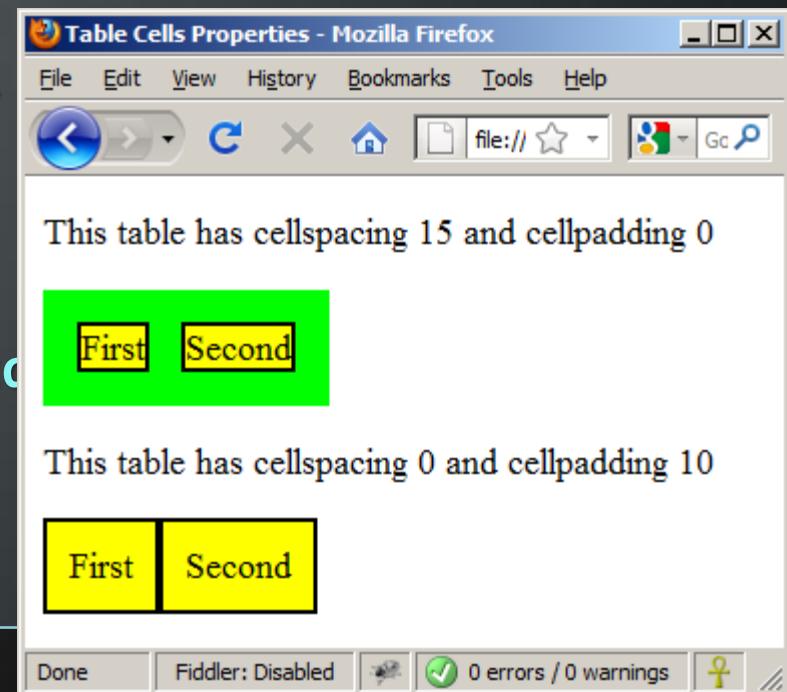

## table-cells.html

```
<html>
  <head><title>Table Cells</title></head>
  <body>
    <table cellspacing="15" cellpadding="0">
      <tr><td>First</td>
      <td>Second</td></tr>
    </table>
    <br/>
    <table cellspacing="0" cellpadding="10">
      <tr><td>First</td><td>Second</td></tr>
    </table>
  </body>
</html>
```

# Cell Spacing and Padding – Example (2)

## table-cells.html

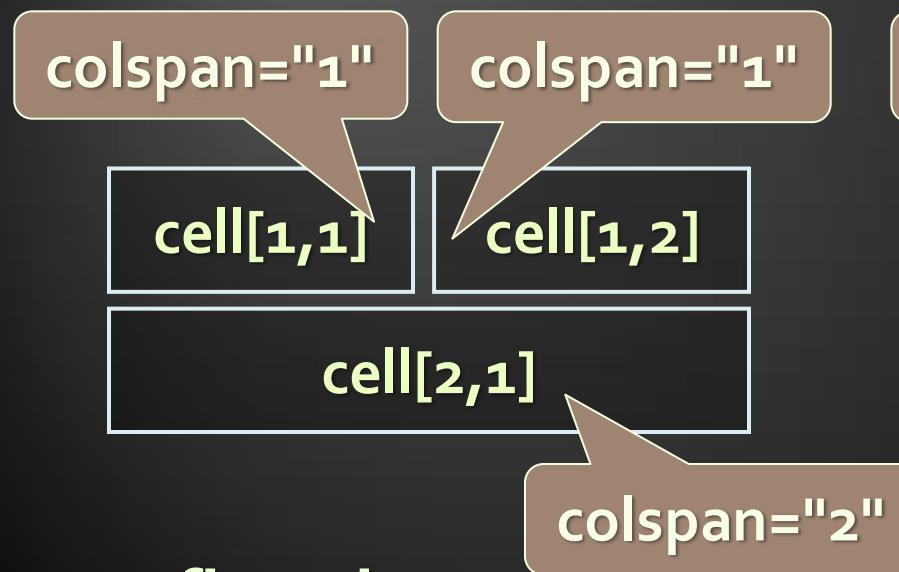

```
<html>
  <head><title>Table Cells</title></head>
  <body>
    <table cellspacing="15" cellpadding="0">
      <tr><td>First</td>
      <td>Second</td></tr>
    </table>
    <br/>
    <table cellspacing="0" cellpadding="10">
      <tr><td>First</td><td>Second</td></tr>
    </table>
  </body>
</html>
```

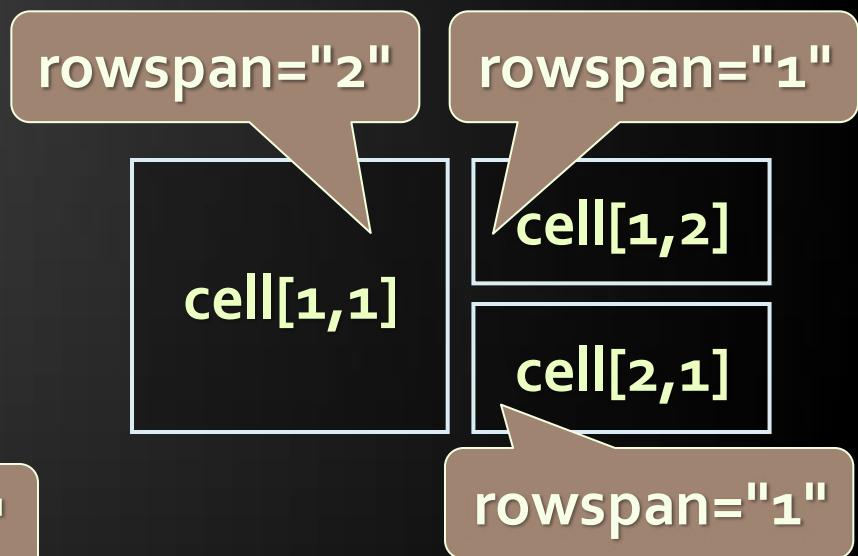

# Column and Row Span

- ◆ Table cells have two important attributes:

- ◆ **colspan**

- ◆

- ◆ Defines how many columns the cell occupies

- ◆ Defines how many rows the cell occupies

# Column and Row Span – Example

## table-colspan-rowspan.html

```
<table cellspacing="0">
  <tr class="1"><td>Cell[1,1]</td>
    <td colspan="2">Cell[2,1]</td></tr>
  <tr class="2"><td>Cell[1,2]</td>
    <td rowspan="2">Cell[2,2]</td>
    <td>Cell[3,2]</td></tr>
  <tr class="3"><td>Cell[1,3]</td>
    <td>Cell[2,3]</td></tr>
</table>
```

# Column and Row Span – Example (2)

## table-colspan-rowspan.html

```
<table cellspacing="0">
  <tr class="1"><td>Cell[1,1]</td>
    <td colspan="2">Cell[2,1]</td></tr>
  <tr class="2"><td>Cell[1,2]</td>
    <td rowspan="2">Cell[2,2]</td>
    <td>Cell[3,2]</td></tr>
  <tr class="3">
    <td>Cell[1,3]</td>
    <td>Cell[2,3]</td>
</table>
```

Cell[1,1]	Cell[2,1]
Cell[1,2]	Cell[2,2]
Cell[1,3]	Cell[2,3]
